Silikal Reactive Resin Flooring for
CLINIC KITCHENS

Expect more from your floor.

Hygienic foundation for food preparation in hospitals

Hygiene is the key in clinic kitchens. Reactive resin flooring from Silikal plays an important role here.

Completely seamless and absolutely easy-care – this flooring creates best preconditions for food preparation in hospitals.

600 m² of artificial resin coating in sunny yellow and neutral grey were installed in kitchens, sculleries, storage areas and cooling rooms of the Markus Hospital in Frankfurt/Main. The added colour quartzes not only give the new clinic extension an appealing look, they also provide extra safety with modified antiskid measures and added lettering.

Modern canteen technology also marks food preparation at the City Clinic Baden-Baden. The new Silikal flooring supports the fast and easy cleaning of the newly installed 550 m² floor.

Resistant against many acids, alkalis, greases, oils, salts and other aggressive substances it is a truly reliable foundation. The coatings are also quickly applied and as soon as one hour after application are already ready to be fully loaded again.
