Silikal Reactive Resin Flooring

for hotels, restaurants and catering

Expect more from your floor.

Where everything needs run smoothly ...

Silikal offers the ideal flooring for kitchens and canteens in hotels and throughout the food industry: completed overnight, robust, attractive

The services offered by hotels, restaurants, canteens and caterers are versatile and demanding. The expectations of a reliable floor-covering are equally large. For decades, the reactive resin flooring from Silikal has been offering a welcome solution in kitchens, washrooms, hallways, cold-storage rooms, cellars and storage areas.

Where it fits the bill

Everywhere, it does the job wherever something might hit the floor... where the soup slops or the cases are dragged over the floor, and where quite rightly the cleaning equipment is in constant use, here the use of a Silikal-flooring has already proved itself. With high scuff resistance, various anti-skid grades, attractive colours and being easy to maintain, it allows everything to run as smooth as butter behind the scenes in the hotel and catering establishments.

Where time is of the essence

Fast service included: Overnight, the necessary renovation of the flooring can be done without any expensive inter-

ruption to business. Within one hour the Silikal resins are cured and can be used to the full extent, even in winter at temperatures of down to -10 °C.

Where hygiene requirements are at the forefront

Reactive resin flooring is resistant to fruit acids, alkalines, acids, oils, and fats. The seamless, sealed surface is completely nonporous and can be extended up the walls to build a closed basin floor if required. This means that no fissures, dusting or holes can form, which in turn reduces the colonisation by microbes and bacteria.

Where it must look good

Floors, which remain undamaged after years of continual stress in hotels and catering establishments, are standard by Silikal. But also interesting is that there are many possibilities for the creativity with coloured flooring, using a combination of pigments, silica sands and coloured flakes: floors with granite-effect, with integrated company logo or differently coloured flooring areas, everything is possible.
